

Basic Vulnerability Scan Report

This report documents the results of a basic vulnerability scan performed on my PC using Nessus Essentials.

Scan Summary

Total Vulnerabilities Found	15
Critical	2
High	4
Medium	6
Low	3

Vulnerabilities by Severity

Top Critical Vulnerabilities

Vulnerability Name	Windows SMBv1 Enabled
Severity	Critical
Risk	High risk of WannaCry-like attacks
Fix	Disable SMBv1 and install latest Windows patches

Vulnerability Name	Outdated Browser Version
Severity	Critical

Risk	Exploitable for remote code execution
Fix	Update browser to the latest version

Additional Vulnerabilities

Vulnerability Name	Weak Password Policy
Severity	High
Risk	Easily crackable passwords increase risk of account compromise
Fix	Enforce strong password policies and enable MFA

Mitigation Checklist

Vulnerability	Status
SMBv1 Enabled	Pending
Outdated Browser	Fixed
Weak Password Policy	Pending

Outcome

Through this task, I gained hands-on experience in running a vulnerability scan, analyzing the results, and identifying potential risks on my PC. I also learned how to document findings, propose mitigations, and visualize results for better reporting.
